## Technical specifications

The little drums mod. Gold 600-1200 are used to carry out laboratory tests. They are built with great care for quality and are meant to be of easy maintenance. They are characterized by:

- ⚙ Supporting structure in tubular stainless steel AISI 304.
- ⚙ Bin made with thickened plates for greater resistance to loads with the inside entirely in AISI 316, equipped with a frame door which measure can be customized, laterally a polycarbonate or interchangeable tempered glass to visualize the process, liquid intake pipe with air vent and anti-water for glass cleaning.
- ⚙ The indirect heating of the crawlspace bin is regulated by a temperature controller or *touch-screen* to keep the temperature of the bath constant, and it is equipped with a tank at n. 04 **EASY TO CHANGE** resistors and with safety thermostat: the water is made circulating by a high-quality circulator pump and rotary joint.
- ⚙ High-quality electromechanical moto reducer group made in Italy. Thanks to a **LOVATO inverter** indeed allowing speed adjustment, the transmission is performed by a chain for greater reliability and ease of maintenance.
- ⚙ Control board complete with *inverter*, timer, thermo-regulator and basic commands is easy to use.

It is customizable with many options such as speed display, additional timers, door positioning, etc.  
The Plus version, then, is equipped with a PLC *touch-screen*.

Safety is guaranteed thanks to the complete protection of the bin made of AISI304 steel, in total compliance with CE standards.

We would remind you that we can customize the whole machine in every single part based on the customer's needs.
